Dear Hiring Team,

I am applying for the AI Strategy & Product Lead role because it sits at the intersection where I have the strongest evidence: practical AI adoption, product and roadmap ownership, regulated fintech, and blockchain custody platforms.

At SCRYPT, I implemented Claude Enterprise with Slack, Linear, email and calendar integrations, creating an always-on AI assistant for executive and cross-functional work across technology, sales and marketing. I also introduced Linear as the company-wide project management platform and coached teams on AI-assisted engineering and workflow automation. That experience maps directly to the need to turn AI into a managed internal platform with adoption, governance, prioritization and measurable business value.

At Ripple / Metaco, I led up to 50 professionals across Geneva and San Francisco building a regulated blockchain custody platform for institutional financial clients. I partnered with leadership, Product, Field Engineering and clients, supported institutional delivery including HSBC Hong Kong, and drove architecture, release quality, monitoring, L3 support and operating discipline. This gives me a strong context for Bitcoin Suisse's crypto-native environment, where product decisions, trust, security and regulatory expectations are tightly linked.

My product background is also hands-on. At Bazzile, as CTO/CPO, I owned product and technology from first production version through cloud, mobile delivery and AI-enabled product work. At FlowBank, I owned roadmap, annual budget, target architecture and execution indicators for the Executive Committee in a FINMA-regulated neobank, including CRM, Core Banking, AWS transition and a real-time data platform connecting trading, compliance, finance, marketing and quantitative teams.

I would like to understand how much strategic ownership this role has over the AI roadmap, governance model, adoption KPIs and platform backlog, and how it reports into leadership. If the mandate is to make AI useful, governed and measurable inside a regulated crypto financial-services organization, I believe I can contribute quickly.

Regards,

Thibault Fouache
