Hiring Team
ASMALLWORLD
CTO (Chief Technology Officer)

June 11, 2026

Dear Hiring Team,

I am applying for the CTO role because ASMALLWORLD's next technology chapter maps closely to the work I have led in practice: executive technology ownership, product engineering, CRM and data architecture, AI automation, platform modernization and lean delivery tied to business outcomes.

At Bazzile, as CPTO and partner, I built a production consumer mobile platform from the ground up: backend, APIs, PostgreSQL data model, cloud infrastructure, mobile delivery, product roadmap and production operations. I also designed and industrialized a voice AI agent, while leading a small multidisciplinary team and external providers. That experience is directly relevant to a CTO role where the technology leader must stay close to product, customer journeys and execution quality.

At FlowBank, I led the technology organization of a FINMA-regulated digital bank, owning the roadmap, annual budget and execution indicators for the Executive Committee. I created the target architecture and real-time data platform connecting trading, compliance, finance, marketing and quantitative teams, initiated CRM and core-banking projects, and managed vendor renewals and infrastructure modernization. This is the background I would bring to ASMALLWORLD's CRM activation, personalization, member data, business analytics and governance needs.

I have also scaled engineering organizations and improved operating discipline. At Ripple / Metaco, I led up to 50 professionals across Geneva and San Francisco on a regulated institutional platform, driving architecture, delivery quality, L3 support, monitoring, release management and technical debt control. At SCRYPT and Wonderful, I focused on practical AI adoption: Claude Enterprise workflows, Linear-based operating models, RAG, voice AI, agent workflows and executive-level demonstrations.

What interests me most in ASMALLWORLD is the combination of a real consumer membership business, a Swiss-listed context, and a technology mandate that is clearly commercial: activation, personalization, partnerships, travel services and member experience. I do not see this as a pure infrastructure role. I see it as a chance to turn data, CRM, product engineering and AI into a stronger operating system for growth.

I am based in Geneva, hold a Swiss C permit, and work fluently in English and French. I would welcome the opportunity to discuss ASMALLWORLD's current stack, team shape, CRM roadmap, Duebendorf/hybrid expectations and the priorities you want the CTO to deliver in the first 6 to 12 months.

Regards,

Thibault Fouache
