

Engineering manager with 15+ years building production financial systems and 7+ years leading distributed engineering teams from 3 to more than 40 people across Geneva, New York, San Francisco and offshore sites. Fintech native across regulated banks (FlowBank, BCP, UBP, Pictet AM), trading and exchange platforms (Glencore, SIX, Swissquote) and digital-asset custody at Ripple — a track record of shipping correctness-critical software where every transaction has direct financial impact. Hands-on operator who runs production: on-call rotations, incident management, observability and blameless retrospectives are the operating norm of the teams I build, not an aspiration.

PROFESSIONAL EXPERIENCE

Ripple

Sep 2023 – Oct 2025

Director of Software Engineering — Ripple Custody

Led an engineering organisation of more than 40 engineers distributed across Geneva, New York and San Francisco, delivering Ripple's regulated digital-asset custody platform to top-tier financial institutions worldwide. Owned the technical roadmap, delivery execution and engineering culture.

- Drove the implementation of Ripple's institutional custody platform for HSBC Hong Kong — a flagship enterprise client delivery requiring close partnership with the customer's technology and risk teams.
- Operated as a manager of both managers and direct engineering reports: restructured engineering into autonomous squads with clear domain ownership across backend, platform and client teams, breaking silos and accelerating cross-functional delivery velocity.
- Created a dedicated support squad owning all incoming client requests and production incidents — decoupled firefighting from roadmap delivery so feature teams kept shipping, while every fix chipped away at the underlying technical debt.
- Partnered with Product, Field Engineering and Customer Success to translate business objectives into an executable technical roadmap.
- Earned consistently high scores in Ripple's company-wide engagement surveys as a manager — sustained through transparent OKRs, structured coaching and a culture of trust.

FlowBank SA

May 2022 – Aug 2023

Global Head of Technology — Executive Director (prev. Strategic Technology Consultant)

- Led the entire technology department (~40 people) at a FINMA-regulated digital bank delivering a high-traffic transactional platform across classical banking services, trading and crypto-enabled products.
- Architected a real-time event-driven data platform — C#/.NET and Go services on AWS — connecting trading, compliance, marketing and finance.
- Initiated and led the migration from on-premise to AWS — designed scalable target architecture, introduced DevOps culture, CI/CD pipelines, release cadence and quality gates across the department.
- Defined IT strategy and the annual technology roadmap presented to the Executive Committee; initiated and led core programmes including CRM and Core Banking.
- Coached engineers and SREs on software craftsmanship and DevOps principles; built the on-call and incident response practice from scratch.

CTO / CPO – Partner

Hands-on technical leader of a real estate platform. Own the full engineering lifecycle from architecture and code to production operations, while managing a small team of engineers shipping continuously to end users.

- Architected and built the production platform end-to-end – Elixir/Phoenix backend, Flutter mobile clients, PostgreSQL data layer, real-time event channels and background job processing – applying TDD and Agile/Scrum throughout.
- Champion of the you-build-it-you-run-it ethos: own the on-call rotation, incident response, monitoring and observability – sustained 99.95%+ platform uptime over multiple years in production.
- Selected and operated cloud infrastructure end-to-end; led the cybersecurity risk assessment and mitigation programme covering authentication, data protection and third-party integrations.
- Manage a team of engineers with a focus on coaching, levelling and career growth – hiring, onboarding and feedback cadences calibrated to a small high-trust group.
- Partner directly with the CEO and product stakeholders to translate business goals into a prioritised roadmap, balancing feature velocity with platform reliability and quality.
