OM Pharma
Meyrin, Geneva, Switzerland

May 30, 2026

Dear OM Pharma team,

I am applying for the Head of IT role in Meyrin because the mandate matches the kind of technology leadership I have been doing in Geneva: define an IT vision, align it with business priorities, govern budget and providers, secure critical systems, support enterprise initiatives, and keep operations reliable in regulated environments.

At FlowBank, I led a technology department of approximately 40 people for a FINMA-regulated neobank. The scope covered software engineering, data, infrastructure, service delivery and outsourced providers. I built the technology vision, roadmap, annual budget and execution indicators for the Executive Committee; initiated the transition from on-premise infrastructure to AWS; and launched core initiatives including CRM, Core Banking and a real-time data platform. This is the closest pattern to your need for IT vision, CAPEX/OPEX ownership, strategic planning, KPI reporting and cross-functional delivery.

At Ripple / Metaco, I led up to 50 professionals on a regulated blockchain custody platform for institutional financial clients. I structured managers, tech leads and squads; created a dedicated support and L3 squad; and strengthened quality, monitoring, release management, technical debt control and client incident handling. That experience maps directly to your need for an IT organization that can deliver performance while remaining robust, secure and operationally disciplined.

For the compliance and risk side, my UBP audit experience gives me a practical base in IT governance, risk, GDPR controls, IAM, senior reporting and remediation. I found an application-role bug affecting 0.5% of bank users during an identity access management audit. I know that compliance is not only documentation. It needs evidence, ownership, lifecycle controls and follow-through in daily operations.

I want to be transparent about one point: I have not spent my career in pharma or GxP environments. My relevant foundation is regulated banking, security-constrained asset management, institutional custody, production operations, vendor governance and audit. I would treat OM Pharma's specific GxP systems, validation processes and production-site constraints as the first ramp-up priority.

The role is attractive because it combines local Geneva impact, direct CTO reporting, a 17-person IT team, cybersecurity, infrastructure, applications, budget, external providers and enterprise digital initiatives. I would welcome a discussion about your current IT organization, GxP systems scope, roadmap priorities, and how hands-on the Head of IT role needs to be.

Kind regards,

Thibault Fouache
