Application: IT Director — Geneva (Ref. JN-052026-7013920)

Dear Hiring Team,

The mandate you describe — owning the end-to-end technology function for an international, privately-held, data-driven business growing across Europe, North America and Asia, and translating business, product and commercial requirements into structured technical execution — maps directly to the IT leadership work I have been doing over the past fifteen years from Geneva.

At Ripple, I directed an organisation of up to 50 engineers split across Geneva and San Francisco delivering a digital asset custody platform for institutional financial clients, and personally managed the implementation for HSBC Hong Kong. I owned the roadmap, hiring and squad-based organisation, and stood up a dedicated support squad to absorb client incidents so that firefighting did not displace delivery — exactly the kind of structured workstreams, ownership and accountability your brief calls for. Before that, at FlowBank, a FINMA-regulated digital bank, I led the entire ~40-person IT department covering software, data and infrastructure: I prepared and owned the technology roadmap and annual budget for the Executive Committee, initiated the Core Banking and CRM programmes with internal teams and external integrators, architected a real-time data platform feeding compliance, finance and marketing, and drove the on-premise to AWS migration alongside modern CI/CD and DevSecOps practices.

On the hands-on infrastructure side, my Pictet Asset Management assignment as Site Reliability Engineer had me technically leading an End User Computing rollout in a security-constrained environment — building the EKS cluster, authoring Helm charts and provisioning everything via Terraform — which is the same discipline a 5–15 person engineering team needs from its IT Director on cloud reliability, security and cost. I am most directly experienced on AWS and Azure, and translate cleanly to GCP for the build-vs-buy, governance and FinOps questions that matter at this scale. On the product-delivery side, I have spent the last five years as CTO and Partner at Bazzile, owning the roadmap of a mobile platform end-to-end with a small team and a constellation of external providers — the same operating model your brief describes.

Pragmatic AI adoption is the through-line of my recent work: at Scrypt I deployed Claude Enterprise across the company integrated with Linear, Slack, email and calendars; at Wonderful as Field CTO I have been embedding enterprise AI workflows into Swiss organisations; and at Ripple I rolled out LLM-based developer tooling and AI agent workflows inside an institutional engineering organisation. I am Geneva-based, hold a Swiss C permit, and am fluent in French and English. I would welcome the opportunity to discuss how I can help your company turn its IT mandate into a sustained delivery and growth capability.

Yours sincerely,
