

Backend engineering leader with 15+ years building production systems and 7+ years managing high-performance backend teams. Hands-on Elixir/Phoenix expert with deep understanding of Ruby on Rails paradigms — both frameworks share the same conventions, ORM patterns (Ecto/ActiveRecord), MVC architecture and productivity-first philosophy. Proven track record scaling backend organisations up to 50 engineers, driving platform reliability on high-traffic transactional platforms, and aligning engineering execution with product strategy in fintech and e-commerce environments.

PROFESSIONAL EXPERIENCE

Bazzile Technology SA

Aug 2020 – Present

CTO / CPO — Partner

- Hands-on technical founder building a consumer platform on Elixir/Phoenix — a stack that shares Ruby on Rails' convention-over-configuration philosophy, MVC architecture, migration-based schema management, and developer ergonomics, while adding fault tolerance through the BEAM virtual machine.
- Built the entire backend with Elixir/Phoenix — REST APIs, real-time event channels, background job processing and database layer with Ecto (equivalent to ActiveRecord) on PostgreSQL.
 - Deployed and operated the production platform using Kamal — a container-based deployment tool enabling zero-downtime releases, health checks and rolling restarts on cloud infrastructure.
 - Implemented robust background job processing with Oban and leveraged the BEAM's built-in concurrency and Mnesia distributed database for caching and state management — a native approach to the same problems solved by Sidekiq and Redis in the Ruby ecosystem.
 - Drove reliability engineering to achieve more than 99.95% platform uptime — implemented monitoring, observability and incident response processes.
 - Owned the full product lifecycle: user research, roadmap prioritisation, iterative delivery cycles and quality assurance with TDD practices throughout.

Ripple

Sep 2023 – Oct 2025

Director of Software Engineering — Ripple Custody

- Led an international backend-heavy engineering organisation of up to 50 engineers across Geneva and San Francisco, building a regulated institutional custody platform. Owned the technical roadmap, delivery execution and engineering culture.
- Scaled the backend organisation from 40 to 50 engineers — defined hiring strategy from job scoping and levelling to structured interviews, continuously raising the bar on talent density.
 - Restructured engineering into autonomous squads with clear domain ownership across backend and platform teams, improving cross-functional delivery velocity and reducing coordination overhead.
 - Drove platform reliability and operational excellence — established on-call rotations, incident management processes, monitoring and observability standards across the backend stack.
 - Partnered with Product and Field Engineers to translate business goals into an executable technical roadmap, balancing feature velocity with platform reliability.
 - Achieved 96% team satisfaction through structured coaching, transparent OKRs and a culture of ownership and accountability.

BACKEND STACK

- ElixirPhoenixEcto
- Ruby on Rails
- PostgreSQLRedis
- Elasticsearch
- KamalDockerAWS
- CI/CD

ALSO PROFICIENT

- TypeScriptScala
- GoRust

LEADERSHIP

- Manager of managers
- Team scaling (50+)
- Squad model
- Coaching
- Hiring & levelling
- C-suite partnership

OPERATIONS

- Incident management
- On-call rotations
- Observability
- Performance tuning
- Release management

LANGUAGES

- French

Native
- English

C1
- German

A2

EDUCATION

MSc Informatics & Networking
EIGSI La Rochelle, 2009

Blockchain Technology
B9lab Ethereum
Blockstars, 2019

Global Head of Technology — Executive Director

- Led the IT department (~40 people) at a FINMA-regulated digital bank, delivering a high-traffic transactional platform for trading, banking and crypto-enabled products.
- Architected a real-time event-driven data platform with PostgreSQL and Redis, connecting trading systems to compliance, marketing and finance functions.
- Initiated the cloud migration to AWS — designed scalable target architecture and introduced DevOps culture, CI/CD pipelines and release cadence with quality gates.
- Defined the technology roadmap and annual IT strategy presented to the Executive Committee; collaborated closely with product teams to align engineering with business priorities.

OTHER EXPERIENCES

Wonderful	Field CTO	Jan 2026 – Mar 2026
Scrypt	Head of Engineering	Nov 2025 – Dec 2025
Union Bancaire Privee	Internal Auditor — IT Security	Nov 2018 – Jul 2020
Banque de Commerce et de Placements	Software Engineer	Nov 2017 – Oct 2018
SIX Swiss Exchange	Backend Developer (Scala)	Feb 2017 – Oct 2017
Glencore	Software Engineer	Aug 2016 – Jan 2017
Swissquote	Technical Lead — high-traffic fintech platform	Jan 2016 – Jul 2016
Rolux SA	Software Engineer (5 years, hands-on)	Jan 2011 – Dec 2015
Axway	Software Engineer	Jan 2009 – Dec 2010

Geneva, Switzerland
Swiss resident
