Application: Head of IT — Asset Management — Mirabaud Asset Management

Dear Hiring Team,

The mandate you describe — owning Mirabaud Asset Management's Digital & IT strategy across applications, data and infrastructure, in a family-business culture that prizes ownership and pragmatism — maps directly to the combination of regulated-banking IT leadership, infrastructure stewardship and applied AI work I have been building over the past fifteen years.

At Ripple, I directed an organisation of up to 50 engineers across Geneva and San Francisco delivering a regulated digital asset custody platform for institutional financial clients, and personally managed the implementation for HSBC Hong Kong — aligning delivery with the client's regulatory and operational requirements. Before that, at FlowBank — a FINMA-regulated digital bank — I led the entire ~40-person IT department, prepared the technology roadmap and annual budget for the Executive Committee, initiated the Core Banking and CRM programmes, drove the on-premise to AWS migration, and architected a real-time data platform connecting trading systems to compliance, finance and marketing. That mandate is the closest analogue I can offer to the breadth Mirabaud Asset Management is asking of its Head of IT.

Two earlier assignments speak directly to the rest of the role. As Site Reliability Engineer at Pictet Asset Management, I technically led the implementation of an End User Computing solution within a security-constrained environment — building the EKS cluster, authoring the Helm charts, and provisioning infrastructure via Terraform — while operating alongside infrastructure specialists and external service providers, the same outsourcing-oversight pattern Mirabaud runs today. As Internal Auditor (IT & Security) at Union Bancaire Privée, I headed audits across the bank's full technology landscape, reported directly to top management on risks and strategic actions, and uncovered a critical IAM bug affecting 0.5% of users — the audit-support and regulatory-liaison side of this role is familiar territory.

I am Geneva-based, a Swiss resident, fluent in French and English, and comfortable in M365/Azure environments. Pragmatic adoption of AI is no longer an adjacent interest: through my recent engagements at Wonderful and Scrypt, I have been embedding AI agents and automation pipelines into financial-services workflows for the past several months. I would welcome the opportunity to discuss how I can help Mirabaud Asset Management turn its Digital & IT mandate into a business-driving capability.

Yours sincerely,

Thibault Fouache
