Application: Head of Products, Tech Client Solutions — Pictet Alternative Advisors

Dear Hiring Team,

The mandate you describe — owning the product lifecycle for Client Reporting, Digital Client Engagement and RFP solutions at PAA, with AI as a strategic lever — maps directly to the combination of product ownership, financial-services depth and AI fluency I have been building for the past fifteen years.

As CTO/CPO at Bazzile, I owned the full product cycle end-to-end: conducting client interviews to surface feature opportunities, translating insights into a prioritised roadmap, and delivering a mobile platform that sustained 99.95% uptime. At FlowBank, a FINMA-regulated digital bank, I led a 40-person IT organisation, defined the technology roadmap and annual budget presented to the Executive Committee, and initiated core product programmes — CRM, core banking, and a real-time data platform connecting trading systems to compliance, finance and marketing. That experience is the closest analogue I can offer to the transformation agenda PAA is pursuing across reporting and client engagement.

At Ripple, I directed an organisation of up to 50 engineers across Geneva and San Francisco delivering a regulated digital asset custody platform, and personally managed the implementation for HSBC Hong Kong — aligning delivery with the client's regulatory and operational requirements. Most recently, as Field CTO at Wonderful, I have been running technical demonstrations of AI agent workflows and automation pipelines for C-level audiences at Swiss banks and asset managers. Embedding AI into client-facing financial products is no longer an adjacent interest — it is the work I do every week.

I am Geneva-based, a Swiss resident, and fluent across the cross-functional conversations this role requires — with engineering, with senior business stakeholders, and with clients. I would welcome the opportunity to discuss how I can help PAA turn its product ambitions into a competitive edge.

Yours sincerely,

Thibault Fouache
