

ENGINEERING LEADERSHIP · SAAS

Engineering and product executive with 15+ years building and scaling high-performance organisations delivering consumer products to end users. Proven ability to lead 50+ engineers as a manager of managers, set technical direction across mobile, desktop and backend systems, and drive high-velocity delivery through DevSecOps best practices. Deep hands-on engineering background — from mobile app development to backend architecture and cryptographic systems — combined with a strong security mindset and C-suite partnership.

PROFESSIONAL EXPERIENCE

Ripple

Sep 2023 – Oct 2025

Director of Software Engineering — Ripple Custody

Led an international engineering organisation of up to 50 engineers across Geneva and San Francisco, building a regulated institutional custody platform spanning mobile, web and backend systems. Owned the technical roadmap, delivery execution, and engineering culture for a mission-critical product serving top-tier financial institutions globally.

- Scaled the organisation from 40 to 50 engineers — defined hiring strategy end-to-end from job scoping and levelling to structured interviews, continuously raising the bar on talent density.
- Operated as a manager of managers: restructured engineering into autonomous squads with clear domain ownership across mobile, backend and platform teams, breaking silos and increasing cross-functional delivery velocity.
- Led technical design in a cryptographic context — the platform handled digital asset custody with HSM integration, key management and secure transaction signing.
- Partnered closely with Product and Field Engineers to translate business goals into an executable technical roadmap, balancing feature velocity with platform reliability and security.
- Achieved 96% team satisfaction scores through structured coaching, transparent OKRs and a culture of ownership.

FlowBank SA

Aug 2022 – Aug 2023

Global Head of Technology — Executive Director

- Led the entire IT department (~40 people) at a FINMA-regulated digital bank, delivering a customer-facing platform spanning web and mobile applications for trading, banking and crypto-enabled products.
- Defined IT strategy and annual technology roadmap presented to the Executive Committee; shaped the bank's digital product portfolio including CRM and Core Banking programmes.
- Architected a real-time event-driven data platform connecting trading systems to compliance, marketing and finance — enabling live data flows across the bank's core functions.
- Initiated the cloud migration from on-premise to AWS, designing scalable target architecture and introducing DevOps culture across the department.
- Drove cross-platform delivery velocity improvements by modernising development and deployment pipelines, establishing release cadence and quality gates.

CTO / CPO - Partner

Hands-on technical founder of a mobile-first consumer product in the real estate sector. Personally architected and built the full stack — from cloud infrastructure and Elixir backend services to a Flutter cross-platform mobile application — following TDD principles. Open-source technology stack throughout.

- Designed and developed the cross-platform mobile application using Flutter, delivering a polished user experience on both iOS and Android from a single codebase.
- Built the backend with Elixir/Phoenix — an open-source, fault-tolerant stack — serving REST APIs with real-time event capabilities to the mobile and web clients.
- Drove reliability engineering and performance tuning to achieve more than 99.95% platform uptime at scale.
- Owned the product roadmap end-to-end — conducted user research, translated insights into prioritised delivery cycles, and shipped iteratively with a focus on quality.
- Planned the cybersecurity risk assessment and mitigation strategy; implemented secure authentication and data protection patterns.
