Application: Head of AI & Automation

Dear Miss Sanchez,

qiibee's ambition to go fully agentic — as its first dedicated AI hire, with a greenfield mandate and direct CEO/COO collaboration — is exactly the kind of high-leverage opportunity I look for. I would love to join and bring good energy and expertise to help advance qiibee's mission of unlocking the global rewards economy.

At Scrypt, I deployed Claude Enterprise as a multi-agent system integrated via Slack with Linear, email and calendars — giving every team always-on AI agents that bridge tech, sales and marketing.

At Wonderful, I served as Field CTO for an enterprise AI platform — implementing voice AI pilots and building comprehensive demos tailored to private banks, while scoping custom agent deployments for Swiss enterprise prospects.

These experiences have given me deep, production-level fluency with the Claude/Anthropic ecosystem, multi-agent orchestration, and cross-functional AI adoption.

Before that, at Ripple I led 50 engineers across Geneva and San Francisco delivering a regulated institutional custody platform.

As CTO of Bazzile, I personally architected the entire stack: an Elixir/Phoenix backend delivering fault-tolerant, concurrent services, paired with a Flutter mobile app. More relevantly, I designed and implemented AI agents using Jido — an Elixir-native agent framework — orchestrating autonomous workflows for data processing and intelligent automation within the platform. Elixir's concurrency model and supervision trees make it an exceptional foundation for reliable agent systems, and having built on it gives me an engineer's intuition for agent architecture, failure modes and governance that no amount of prompt engineering alone can provide.

I would welcome the opportunity to discuss how I can contribute to qiibee's future!

Yours sincerely,

Thibault Fouache
