Hiring Team
Thrivo Wealth Partners AG
Founding Engineer / Lead Architect

June 1, 2026

Dear Hiring Team,

I am applying for the Founding Engineer / Lead Architect role because ThrivoOS sits at a rare intersection I know well: founder-stage platform building, regulated financial services, cloud architecture, auditability and practical AI workflows.

At Bazzile, I built the first production version of the platform end-to-end as CTO/CPO and partner: backend, PostgreSQL, APIs, production infrastructure, mobile delivery and AI-enabled product work. That experience is directly relevant to an early technical leadership role where architecture choices, product constraints and delivery speed have to be balanced from the beginning.

I also bring regulated financial-platform experience. At FlowBank, I led the technology department of a FINMA-regulated neobank, owned the roadmap and execution indicators for the Executive Committee, created target architecture, initiated the AWS transition and drove data-platform and core banking initiatives. At Ripple / Metaco, I led up to 50 professionals building institutional blockchain custody infrastructure, with strong attention to security, reliability, auditability and client trust.

The AI layer of ThrivoOS is especially interesting. At SCRYPT, I implemented Claude Enterprise through Slack with Linear, email and calendars to create an always-on AI assistant for executive and cross-functional workflows. At Wonderful, I led enterprise AI platform discussions and demonstrations for Swiss financial services and regulated organizations. I care about AI systems that are useful and controlled: clear data boundaries, human accountability, privacy, evidence and workflow fit.

I do not want to overstate one technical detail: my background is strong in regulated architecture, backend systems, PostgreSQL, cloud and data workflows, but I would treat production Event Sourcing/CQRS choices as a design decision to validate against Thrivo's auditability, team size and product constraints rather than as dogma. The value I would bring is the judgment to make those choices pragmatically and to build the operating model around them.

I am based in Geneva with a Swiss work permit C and can work remotely across CET hours. I would welcome a conversation about the first six months, architecture ownership, the hiring plan, partner-firm pilots and the balance between hands-on implementation and technical leadership.

Regards,

Thibault Fouache
