Hiring Team
Alpian
Business Technology Lead

June 4, 2026

Dear Hiring Team,

I am applying for the Business Technology Lead role because it sits exactly at the intersection where I have delivered the most value: regulated financial services, operational technology enablement, AI automation, product/engineering alignment and measurable production outcomes. Alpian is also not an abstract company to me: I have been a client since nearly the inception of the bank, and while working at FlowBank I met several people from Alpian through a common project between the two banks. That gave me a direct appreciation for Alpian's ambition, operating context and product culture.

At FlowBank, I led the full technology department of a FINMA-regulated neobank, covering software engineering, data, infrastructure, service delivery and outsourced providers. I owned the technology roadmap, annual budget and execution indicators for the Executive Committee, initiated the transition from on-premise infrastructure to AWS, and created the target architecture and real-time data platform connecting trading, compliance, finance, marketing and quantitative teams. That experience is directly relevant to Alpian's need to operationalize technology inside a licensed digital bank without compromising reliability or regulatory discipline.

More recently at SCRYPT, I drove company-wide AI adoption by implementing Claude Enterprise through Slack with Linear, email and calendar integrations. This was a practical operating-model project, not a symbolic AI rollout: the objective was to make cross-functional work more structured, visible and actionable across technology, sales, marketing and leadership. I also introduced Linear company-wide, reorganized teams around delivery and L3 support, and coached people on AI-assisted engineering and workflow automation.

I also bring a controls and audit mindset. At UBP, I led IT and banking security audits covering governance, risk, identity access management and GDPR-related controls, prepared remediation recommendations and reported technology risk posture to senior management. At Ripple / Metaco, I led engineering for a regulated blockchain custody platform for institutional financial clients, partnering with Product, Field Engineering, leadership and clients while establishing practices around monitoring, QA, release management, technical debt control and L3 support.

What interests me about Alpian is the specificity of the mandate: starting with Compliance, identifying automation and AI opportunities in KYC, transaction monitoring and operational controls, translating operational constraints into executable solution designs, and tracking concrete impact rather than transformation jargon. As a long-standing client who has also seen Alpian from the Swiss digital-banking ecosystem side, I find this especially compelling. It is the right way to apply AI in a bank: close to real workflows, with production discipline, auditability and business ownership.

I am based in Geneva, hold a Swiss C permit, and work fluently in English and French. I would welcome the opportunity to discuss how my regulated banking, AI enablement and technology leadership background can help Alpian scale its operations while preserving the standards expected of a Swiss digital private bank.

Regards,

Thibault Fouache
