Hiring Team
Oracle
Switzerland

May 30, 2026

Dear Hiring Team,

I am applying for the Software Development Snr Manager role because the core mandate matches the work I have done for the past several years: lead engineering teams, improve existing software architectures, keep delivery grounded in quality and reliability, and make technical decisions understandable for both engineers and leadership.

At Ripple / Metaco, I led up to 50 professionals across Geneva and San Francisco building a regulated blockchain custody platform for institutional financial clients. The role combined people management, architecture, technical debt control, code and design reviews, testing strategy, monitoring, release management, QA, and L3 support. I also managed managers and tech leads, so my contribution was not limited to delivery follow-up; it included team structure, coaching, ownership, and the operating rhythm needed to sustain engineering quality.

At FlowBank, I led a technology department of roughly 40 people for a FINMA-regulated neobank. I prepared the technology roadmap, annual budget, target architecture, and execution indicators for the Executive Committee, initiated the transition from on-premise infrastructure to AWS, and launched core projects such as CRM and Core Banking. This is relevant to Oracle's need for a manager who can work inside an existing architecture while still identifying where architecture, platform practices, and team execution should improve.

My earlier engineering background also gives me enough technical depth to be useful in design and debugging conversations. I built and led delivery across Java, Spring Boot, Angular, Scala, Node.js, Python, Kubernetes, Docker, GitLab, CI/CD, Bamboo, Nexus, Maven, LDAP, and Oracle Identity Manager environments. I have worked on banking systems, commodity trade finance tooling, trading platforms, internal enterprise applications, identity management, and cloud infrastructure.

I would like to understand which Oracle product organization this role belongs to, how many engineers and managers are in scope, and what the first 6-12 month priorities are. If the position is a real multi-team M3 leadership mandate, I believe my combination of software engineering management, architecture, regulated systems, and operating discipline would be directly useful.

Regards,

Thibault Fouache
