Hiring Team
Sandmark
Geneva, Switzerland

June 26, 2026

Dear Hiring Team,

I am applying for the Technology Director role because it sits at the intersection of digital assets, data products, engineering delivery and business translation, which is where I have done my strongest work.

At Ripple / Metaco, I led up to 50 professionals across Geneva and San Francisco building a regulated blockchain custody platform for institutional financial clients. I managed managers, tech leads and engineering teams, structured squads, created an L3 support model and strengthened quality, release, monitoring and technical debt practices.

At FlowBank, I led a technology department of approximately 40 people for a FINMA-regulated neobank. I owned the roadmap, annual budget and Executive Committee execution indicators, initiated the AWS transition, created a real-time data platform connecting trading, compliance, finance, marketing and quantitative teams, and managed vendors and external providers.

Sandmark is compelling because the technology challenge is not only infrastructure. It is building reliable data products and internal structures that let editorial, product and commercial teams move quickly while preserving quality, security, cost discipline and trust. I also noticed from public LinkedIn profiles that two former FlowBank colleagues, Michelle Fotopoulou and Marie de Fontenay, are now at Sandmark. I have not discussed this application with them, but it reinforced my sense that the company is building in a direction close to the fintech and data environment I know well.

I can bring the structure of a regulated technology organization without making a young company heavy.

I am Geneva-based, hold a Swiss C permit, and work fluently in English and French. I would welcome the opportunity to discuss how my digital-assets, fintech, cloud and product-delivery background can help Sandmark scale its technical platform and data ambitions.

Regards,

Thibault Fouache
