Dear Hiring Team,

I am applying for the Strategic Delivery Lead, International Public Sector role because it sits exactly at the intersection where I create the most value: AI adoption, regulated stakeholders, technical scoping, executive communication and delivery governance. I have spent the last years bridging strategy, product, architecture, risk and client delivery in environments where trust and operational discipline matter.

Most recently, as Field CTO at Wonderful, I led customer-facing AI platform discussions with Swiss enterprise prospects, including financial services and regulated organizations. I demonstrated AI agent workflows, RAG, voice AI, automation pipelines and integration patterns to both C-level and technical audiences, then translated those capabilities into business value, adoption plans and measurable use cases.

At SCRYPT, I implemented Claude Enterprise through Slack with Linear, email and calendar integrations. The result was an always-on AI operating layer for executive and cross-functional work across technology, sales and marketing. That experience is relevant to OpenAI for Government because adoption did not depend on a slide deck; it depended on workflow fit, governance, stakeholder confidence and useful daily behavior.

I also bring regulated delivery depth. At Ripple / Metaco, I led up to 50 professionals across Geneva and San Francisco building a regulated blockchain custody platform for institutional financial clients, including delivery support for HSBC Hong Kong. The role required architecture across multiple products, client-facing issue resolution, prioritization, risk anticipation, release management, monitoring, QA, technical debt control and close partnership with Product and Field Engineering.

At FlowBank, a FINMA-regulated neobank, I led a technology department of approximately 40 people, owned the technology roadmap and execution indicators for the Executive Committee, initiated the move from on-premise infrastructure to AWS, and created a real-time data platform connecting trading, compliance, finance, marketing and quantitative teams. Earlier at UBP, I led IT and security audits covering governance, risk, identity access management and GDPR controls, reporting remediation plans to senior management in French and English.

My edge for OpenAI is not academic model research. It is the ability to turn frontier AI capability into credible institutional deployment: clear problem framing, technical discovery, delivery milestones, security and policy alignment, executive communication and adoption patterns that survive contact with real organizations.

Regards,

Thibault Fouache
