Hiring Team
Deel
Head of Engineering (FinTech)

June 1, 2026

Dear Hiring Team,

I am applying for the Head of Engineering (FinTech) role because it is close to the work I have done at the intersection of regulated financial platforms, engineering scale, product execution and AI-enabled operating models.

At Ripple / Metaco, I led up to 50 professionals across Geneva and San Francisco building a regulated blockchain custody platform for institutional financial clients. I managed managers, tech leads and engineering teams, partnered with Product and Field Engineering, and supported client-specific outcomes including HSBC Hong Kong. The work required the same operating discipline Deel describes: security, auditability, strong ownership, reliable delivery and high trust with institutional stakeholders.

At FlowBank, I led the technology department of a FINMA-regulated neobank, owned the roadmap, annual budget and execution indicators for the Executive Committee, and drove target architecture, AWS migration, data-platform work, CRM and Core Banking initiatives. That experience is directly relevant to building financial systems that finance, compliance and engineering teams can rely on.

The AI-first part of the Deel mandate is especially interesting. At SCRYPT, I implemented Claude Enterprise through Slack with Linear, email and calendars to create an always-on AI assistant for executive and cross-functional workflows. At Wonderful, I led enterprise AI platform discussions and demos for Swiss financial services and regulated organizations. I care about AI that improves delivery and control, not just productivity claims: guardrails, auditability, clear system boundaries and human accountability matter most in regulated financial workflows.

I do not want to overstate one point: I have led regulated fintech and custody platforms, but I have not personally owned a Deel-scale payments, ledger and treasury platform. My relevant strength is the adjacent pattern: scaling engineering organizations around critical financial infrastructure, building the operating model, partnering across Product, Finance, Compliance and clients, and keeping speed balanced with control.

I am based in Geneva with a Swiss work permit C and can operate fully remotely across EMEA. I would welcome a conversation on the team scope, reporting line, payments and ledger maturity, and the outcomes expected in the first six months.

Regards,

Thibault Fouache
