Hiring Team  
Digital Asset  
Zurich, Switzerland

May 31, 2026

Dear Hiring Team,

I am applying for the Senior Director of Engineering role because it is unusually close to my recent work: leading regulated blockchain engineering, scaling global teams, and building the delivery operating model around high-trust financial infrastructure.

At Ripple / Metaco, I led up to 50 professionals across Geneva and San Francisco developing a regulated blockchain custody platform for institutional financial clients. I managed managers, tech leads and engineering teams; supported hiring, levelling, coaching and career growth; and partnered with leadership, Product, Field Engineering and clients. I also supported institutional delivery including HSBC Hong Kong, which gave me direct exposure to the reliability, security and delivery expectations of large financial institutions.

The part of the Digital Asset mandate that resonates most is the distinction between the CTO owning the technical soul and the Senior Director building the delivery engine. At Ripple / Metaco, I organized teams into squads, created a dedicated L3 support model, strengthened QA, monitoring, release management, design reviews, technical debt control and multi-quarter planning. At FlowBank, I led a 40-person technology department in a FINMA-regulated neobank, owned the roadmap, annual budget and execution indicators for the Executive Committee, and drove target architecture, AWS transition, CRM, Core Banking and data-platform work.

I do not claim direct Canton or Daml experience. What I bring is the adjacent pattern Digital Asset appears to need: regulated financial software, blockchain custody, institutional clients, manager-of-managers leadership, delivery visibility, security posture and engineering culture. I am technical enough to partner credibly with architects and engineers, while being most useful at the organizational and delivery level.

I am based in Geneva and I am a parent, so I would like to align early on the expected Zurich cadence. I can be present in Zurich for planned leadership, product, architecture and engineering sessions, but a fixed weekly commute would be difficult. If the role can work with a clear and pragmatic cadence, I believe there is a strong fit.

I would welcome the opportunity to discuss how my Ripple / Metaco and FlowBank experience maps to Digital Asset's next stage of engineering scale on the Canton Network.

Regards,

**Thibault Fouache**
