Hiring Team
Revizto
Switzerland / Lausanne

May 30, 2026

Dear Hiring Team,

I am applying for the Business Technology & AI Enablement Director role because it combines the parts of technology leadership where I have the strongest practical evidence: internal AI adoption, SaaS and vendor governance, secure access and operating discipline, and remote-first technology enablement for distributed teams.

At SCRYPT, I implemented Claude Enterprise with Slack, Linear, email, and calendar integrations, creating an always-on AI assistant for executive and cross-functional work across technology, sales, and marketing. I also introduced Linear as the company-wide project management platform and coached teams on AI-assisted engineering and workflow automation. That experience maps directly to Revizto's need to turn AI tools into useful, governed, measurable business workflows rather than disconnected experiments.

At FlowBank, I led a technology department of about 40 people for a FINMA-regulated neobank, covering engineering, data, infrastructure, service delivery, and outsourced providers. I owned the technology roadmap, annual budget, target architecture, vendor renewals, and execution indicators for the Executive Committee. I also initiated CRM, Core Banking, AWS transition, DevSecOps culture, and a real-time data platform connecting trading, compliance, finance, marketing, and quantitative teams. This gives me the governance and stakeholder background needed for business systems, vendor spend, security, and cost discipline.

At Ripple / Metaco, I led distributed teams across Geneva and San Francisco and created a dedicated support and L3 squad to absorb incidents while protecting roadmap delivery. At UBP and Rolex, I worked on IT audit, GDPR controls, identity access management, LDAP, and Oracle Identity Manager. I would not position myself as a pure corporate helpdesk or device-lifecycle specialist; my value is in building the operating model around tools, access, ownership, support, security, adoption, and executive decision-making.

I would like to understand the reporting line, current team size, expected Lausanne presence, and how the role is split between strategic AI/business systems enablement and operational IT support. If the mandate is to make Revizto's internal technology stack more coherent, governed, AI-enabled, and efficient as the company grows, I believe I can contribute quickly.

Regards,

Thibault Fouache
