Dear Hiring Team,

I am applying for the Principal GTM Specialist Solution Architect AI/ML, GenAI role because it combines the work where I create the most value: enterprise GenAI architecture, C-suite customer engagement, regulated cloud adoption, product-roadmap feedback and field mechanisms that help teams turn AI from demonstrations into production adoption.

Most recently, as Field CTO at Wonderful, I led customer-facing AI platform discussions with Swiss enterprise prospects, including financial services and regulated organizations. I demonstrated AI agent workflows, RAG, voice AI, automation and integration patterns to both executive and technical audiences, translating platform capabilities into business value, architecture options and adoption plans. At SCRYPT, I then implemented Claude Enterprise through Slack with Linear, email and calendar integrations, creating an always-on AI operating layer across technology, sales and marketing.

I also bring the regulated cloud and architecture background needed for enterprise GenAI adoption. At FlowBank, a FINMA-regulated neobank, I led a technology department of approximately 40 people, owned the technology roadmap and execution indicators for the Executive Committee, initiated the transition from on-premise infrastructure to AWS, and launched a real-time data platform serving trading, compliance, finance, marketing and quantitative teams. At Pictet Asset Management, I worked directly with EKS, Helm and Terraform in a security-constrained environment.

At Ripple / Metaco, I led up to 50 professionals across Geneva and San Francisco building a regulated blockchain custody platform for institutional clients. The role required architecture across multiple products and services, customer-facing delivery with institutions including HSBC Hong Kong, monitoring, release management, QA, L3 support, technical debt control and collaboration with Product and Field Engineering. Earlier at UBP, I led IT and security audits covering governance, risk, identity access management and GDPR controls, which is relevant to responsible AI and enterprise risk conversations.

I would be transparent about my profile: my edge is not academic model research; it is applied GenAI architecture, customer translation, responsible adoption, regulated cloud modernization and the ability to connect executive priorities with production engineering reality. I am Geneva-based and noticed the role is listed in Zurich; since AWS Switzerland has Geneva presence, I would like to confirm whether this Principal EMEA specialist role can be based from Geneva with travel to Zurich, customers and EMEA engagements as needed.

Regards,

Thibault Fouache
