Hiring Team  
Cohere  
EMEA Deployment Engineering

June 1, 2026

Dear Hiring Team,

I am applying for the Engineering Manager, FDE Infrastructure role because it matches the part of my work I enjoy most: leading technical teams close to customers, making complex enterprise deployments work, and turning AI platform capability into reliable production outcomes.

As Field CTO at Wonderful, I led customer-facing AI platform discussions with Swiss enterprise prospects, including financial services and regulated organizations. I demonstrated AI agent workflows, RAG, voice AI, automation pipelines and integration patterns to both C-level and technical audiences, then translated those capabilities into implementation options, business value and adoption plans.

At Ripple / Metaco, I led up to 50 professionals across Geneva and San Francisco building a regulated blockchain custody platform for institutional financial clients. That role was highly relevant to Cohere's FDE infrastructure mandate: I partnered with Product, Field Engineering, leadership and clients, supported customer-specific use cases including HSBC Hong Kong, created a dedicated L3/support squad, and drove architecture, QA, monitoring, release management, technical debt control and escalation practices across multiple products and services.

I also bring the infrastructure depth needed to lead from the front. At FlowBank, a FINMA-regulated neobank, I led a technology department of around 40 people, owned the technology roadmap and execution indicators for the Executive Committee, initiated the move from on-premise infrastructure to AWS, and created a real-time data platform connecting trading, compliance, finance, marketing and quantitative teams. At Pictet Asset Management, I created EKS clusters, Helm charts and Terraform infrastructure in a security-constrained environment.

The reason Cohere is interesting to me is the combination of frontier enterprise AI, private cloud/on-prem deployment reality, and customer trust. My edge is not only managing engineers. It is knowing when to go deep technically, when to create repeatable deployment patterns, and how to keep customer outcomes, product feedback, security posture and team development moving in the same direction.

One practical point to clarify early: I am based in Geneva with a Swiss C permit. If the EMEA setup supports Switzerland or a workable remote employment structure, I would be glad to discuss how my Field CTO, regulated platform and infrastructure leadership background maps to this team.

Regards,

**Thibault Fouache**
