refurbed
Internal Technology & AI

June 1, 2026

Dear Hiring Team,

I am applying for the Head of Internal Technology & AI role because it matches the transformation work I have been doing most recently: making AI useful inside organizations, building the internal technology backbone around it, and turning adoption into measurable operating change.

At SCRYPT, I implemented Claude Enterprise through Slack with Linear, email and calendar integrations. The goal was not to run a symbolic AI rollout. It was to create an always-on AI operating layer for executive and cross-functional work across technology, sales and marketing. I also introduced Linear company-wide, defined and delivered the product and engineering roadmap, reorganized teams around delivery and L3 support, and coached people on AI-assisted engineering and practical workflow automation.

At FlowBank, a FINMA-regulated neobank, I led the full technology department of around 40 people across software engineering, data, infrastructure, service delivery and outsourced providers. I owned the technology roadmap, annual budget, execution indicators and architecture direction for the Executive Committee, initiated the move from on-premise infrastructure to AWS, managed vendor renewals and service providers, and created the target architecture and real-time data platform connecting trading, compliance, finance, marketing and quantitative teams.

I also bring AI and architecture credibility close to the business. As Field CTO at Wonderful, I led customer-facing AI platform discussions with Swiss enterprise prospects, including financial services and regulated organizations. I demonstrated AI agent workflows, RAG, voice AI, automation pipelines and integration patterns, then translated those capabilities into implementation options, business value, adoption plans and measurable use cases.

Earlier, at Ripple / Metaco, I led up to 50 professionals building a regulated blockchain custody platform for institutional financial clients. I partnered with Product, Field Engineering, leadership and clients; drove architecture across products and services; created a dedicated L3/support squad; and established practices for monitoring, QA, release management, technical debt control and delivery reliability. At UBP, I led IT and security audits covering governance, risk, identity access management and GDPR-related controls.

What interests me about refurbed is the clarity of the mandate: AI transformation, internal AI tooling, governance, internal products, corporate IT outcomes and a small cross-disciplinary team. That is exactly the kind of role where technology leadership should combine strategy, architecture, change management and operating discipline.

I am based in Geneva with a Swiss C permit. Since the role is remote in Europe, I would be glad to discuss the right employment setup and how my AI adoption, internal technology and regulated platform background can help refurbed become a more AI-native company.

Regards,

Thibault Fouache
